

The animated human interFACE for multimedia computing.

Bright Star Technology presents interFACE™, the tool powering a revolution in the way we work with computers. InterFACE puts more creative control into your hands and more punch into your finished products by incorporating the latest advances in Bright Star's patented random-access animation technology.

With interFACE, you can quickly and easily synchronize digitized sound with animation and lip movements to add lifelike agents to your projects. The interFACE agents you create will break down the barriers of communication by interacting with users on a more human level.

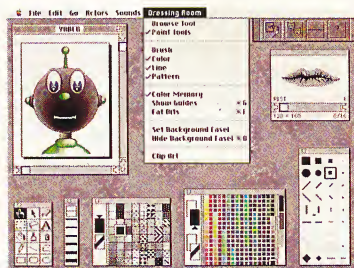

Create talking agents with these special features:

- 120 facial image positions
- Color or black & white images
- Flexible actor sizing
- Multiple on-screen actors
- Compatible with C, Pascal, SuperCard, HyperCard, and most products that support XCMDs
- Imports color to HyperCard
- Includes sample agent desktop presentation program
- Excellent for general purpose animation

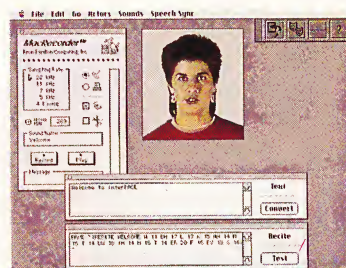

Works on all Macintosh computers from the Plus to the IIfx with 2Mbyte or larger memory. Hard drive recommended.

Use a "live" interFACE agent to:

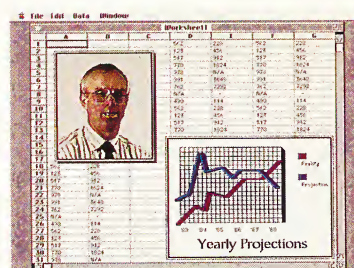

- Enliven training and instructional programs
- Strengthen corporate communications
- Capture attention for computer "soft ads"
- Guide users through a data base
- Improve in-store product demonstrations or sales presentations
- Decrease training time
- Enhance online help systems
- Add life to informational kiosks
- Enrich multimedia storyboards
- Interface with telecommunications programs

Animated images called actors are created in the Dressing Room, a powerful yet easy-to-use paint and animation environment. Images created in other applications can also be imported into interFACE.

Speech Sync makes it easy to quickly record and synchronize animation to digitized sounds. Using this unique tool, your actors can speak with any voice.

Agents are excellent at capturing attention and enhancing your desktop presentations, kiosks, databases, online help and multimedia creations.

interFACE can be used for general-purpose animation and can add color to black & white applications such as HyperCard. Take advantage of interFACE's unique animation.
